# ABSTRACT

Cryptocurrency trading is one of the most lucrative options in the world of investors and traders. Unfortunately, the high volatility in value, the risk of scams, piracy and hacking have been invading more and more the cryptocurrency world.

GhostShell provides the ultimate stealth military grade technology to prevent you from being tracked/traced by giving you the complete anonymity in every single transaction.

GhostShell is not only for the people already inside the cryptocurrency world, but it is also for those that are new to this kind of technology. GTST, known as GhostShell, will provide a complete guide for new people, teaching at least the minimum "know-how" of how to trade, buy, sell and send in complete anonymity.

This is not only an energy efficient approach to validation of the transactions in the blockchain, as opposed to proof-of-work. It is also the guarantee of security of your own money and transactions.

Each day a new privacy scandal comes out, and GTST aims to bring you the final dot to get you the full privacy and anonymity you need. Send, receive, buy and trade without anyone spying on you or knowing what you do. It is a Human Right to have privacy, and you choose how much you wish to have.

We believe GTST will finally bring back the meaning of privacy, anonymity and security that was supposed to be in every single cryptocurrency.

# BACKGROUND

For a long time, cryptocurrencies did not have a great recognition of the technology industry, but in 2017 the industry gained mainstream recognition. Due to this, almost every single person nowadays knows at least what Bitcoin or Cryptocurrency is. This growing popularity of the cryptocurrencies in the mainstream led thousands of new people into the cryptocurrency market.

When people think about cryptocurrencies they almost get right into the point of "volatility", however, volatility simply means that the price swings for a particular value depending on the demanding.

This is evident with the great impulse of the Bitcoin, Ethereum, Ripple and other cryptocurrencies value in December of 2017. Some holders became millionaires in months when Bitcoin rose from nearly $4,000 to $19,000 in days.

Many investors are turning towards this market, seeking a better return than the established financial markets like the FX markets with lower spreads.

# STATEMENT OF THE PROBLEM

Despite the lucrative appeal of the cryptocurrency industry, it is one of the riskiest industries to invest in.

There is too much risk when making a transaction because there is no privacy, no anonymity, no anything. Everything is exposed to the public, and it is heartbreaking seeing that this issue has not been solved yet.

Cryptocurrencies are supposed to give its users the full anonymity and privacy, while many of them do not, leaving exposed transactions to the public, wallet balances and so on, and do not intend to change this, leaving its users exposed.

GhostShell aims to bring the final dot on that. GTST is the secure way for fast, anonymous and private transactions around the world.

We want to bring you the solution for these problems. We want people that suffer from dictatorships, unfair sanctions, starvation derived from their regimes in African and Asian countries to have the right of being more financially independent. This will help people get an easier access to the basic needs such as food, medical care, and more.

Having true financial independence from all these dictatorships, unfair sanctions and regimes is their worst nightmare. GhostShell aims to bring that to people around the world without any restrictions. It is unfair to not even have a way to get financial help from outside the country through legitimate entities, and GTST is the solution for all these issues.

# INTRODUCING GHOSTSHELL

GhostShell is a cryptocurrency that gives its users the full anonymity on every single move.

These technologies are present in GTS blockchain to provide what is called by us 'true privacy'.

# GHOSTSHELL FEATURES

**Secure and confidential**

As a blockchain-based cryptocurrency, GTSTT uses cryptographic encryption to protect the information in the blockchain.

**Transparency**

All the transactions are authenticated multiple times preventing any internal fraud.

**Fast transaction speeds**

Every single transaction is fast even when it passes through all of the security measures applied.

# FUTURE PROJECTS

GhostShell Team will develop:

**An Exchange with staking pool**

You will be able to trade on an advanced secure platform.

• You will be able to stake your coins and trade on the same platform.

• Instant exchange between all listed coins.

• GTST coins will be usable to pay for trading fees at a discounted rate.

**An "ebay" like website using only cryptocurrencies**

• Users will be able to pay for products using the most common cryptocurrencies and GTS.

• All transactions will be secure and protected.

# WALLETS

GhostShell will have wallets for all flavours. There will be a wallet for:

1.  Desktop (Windows, Mac, Linux);
2.  Mobile (Android based systems and iOS);
3.  Cloud Wallets accessible through the web;

# GTST ALLOCATION

Coin Distribution

10 % To Community
08 % Reserved Fund
12 % Team
70 % Sold Globaly

Sale Contribution

10 % Maintenance
08 % Reserved Fund
12 % Team
70 % Exchange Project & Others

# TEAM

**Alexandre Nogueira**
CEO | Dev | CyberSec Expert

**Carlos Sousa**
Financial Advisor

**Paulo Manjua**
Lead Designer

**Erick Fuster**
Marketing Head

# ROADMAP
